

# Practical 1A

**Aim:** Create a simple Calculator application using servlet.

## **Program Code:**

### ***Index.html***

```
<?xml version='1.0' encoding='UTF-8' ?>

<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">

<html xmlns="http://www.w3.org/1999/xhtml"
      xmlns:h="http://xmlns.jcp.org/jsf/html">

  <head>

    <title>Calculator</title>

  </head>

  <body>

<form action="CalculatorServlet">

  Enter a first Number

  <input type="text" name ="txt1"> </input><br></br>

  Enter a Second Number

  <input type="text" name ="txt2"> </input><br></br>

  <br></br>select a operation

  <select name="opr">

    <option value="+">+</option>

    <option value="-">-</option>

    <option value="*">*</option>

    <option value="/">/</option>

  </select>

  <!--<input type="radio" name="opr" value="+">Add</input>

  <input type="radio" name="opr" value="*">multiply</input>

  <input type="radio" name="opr" value="/">division</input>

  <input type="radio" name="opr" value="-">subtraction</input><br></br><br></br>-->

  <input type="reset" value="reset"></input>

  <input type="submit" value="calculate"></input>
```

```
        </form>
    </body>
</html>
```

## CalculatorServlet.java

```
package mypack;

import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;

public class CalculatorServlet extends HttpServlet {
    protected void processRequest(HttpServletRequest request, HttpServletResponse
    response)
        throws ServletException, IOException
    {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        try {
            out.println("<!DOCTYPE html>");
            out.println("<html>");
            out.println("<head>");
            out.println("<title>Servlet CalculatorServlet</title>");
            out.println("</head>");
            out.println("<body>");

            double n1 = Double.parseDouble(request.getParameter("txt1"));
            double n2 = Double.parseDouble(request.getParameter("txt2"));
            double result = 0;
```

```
String opr = request.getParameter("opr");
if(opr.equals("+")) result = n1+n2;
if(opr.equals("-")) result = n1-n2;
if(opr.equals("*")) result = n1*n2;
if(opr.equals("/")) result = n1/n2;
out.println("<h1> Result : " + result + "</h1>");
out.println("</body>");
out.println("</html>");
} finally {
    out.close();
}
}
```

## Output:

Enter a first Number

Enter a Second Number

select a operation

**Result : 16.0**

# Practical 1B

**Aim:** Create a servlet for a login page. If the username and password are correct then it says message “Hello” else a message “login failed”.

## **Program:**

# DATA VALIDATED SUCCESSFULLY

**C) Aim:** Create a registration and login JSP application to register and authenticate the user based on username and password using JDBC.

**Program Code:**

**index.html**

```
<html>

<head><title>JSP With JDBC</title></head>

<body>

    <h1><a href="Register.html" >New User Register Here</a></h1>

    <h1><a href="Login.html" >Click Here to Login</a></h1>

</body>

</html>
```

**Regsiter.html**

```
<html><head><title>New User Registration Page</title></head>

<body>

    <form action="Register.jsp" >

        <h1> New User Registration Page</h1>

        Enter User Name <input type="text" name="txtName" ><br>

        Enter Password <input type="password" name="txtPass1" ><br>

        Re-Enter Password<input type="password" name="txtPass2" ><br>

        Enter Email<input type="text" name="txtEmail" ><br>

        Enter Country Name <input type="text" name="txtCon" ><br>

        <input type="reset" ><input type="submit" value="REGISTER" >

    </form>

</body>

</html>
```

```
<%@page contentType="text/html" import="java.sql.*"%>

<html><body>

    <h1>Registration JSP Page</h1>

    <%

        String uname=request.getParameter("txtName");

# Practical-6

**A) Aim:** Create a Currency Converter application using EJB.

## Program Code:

### index.html

```
<html><head><title>Currency Converter</title></head>

<body>

    <form action="CCServlet" >

        Enter Amount <input type="text" name="amt"><br>

        Select Conversion Type

        <input type="radio" name="type" value="r2d" checked>Rupees to Dollar

        <input type="radio" name="type" value="d2r" >Dollor to Rupees<br>

        <input type="reset" ><input type="submit" value="CONVERT" >

    </form>

</body>

</html>
```

### CCServlet.java

```
package mypack;

import java.io.*;

import javax.servlet.*;

import javax.servlet.http.*;

import javax.ejb.EJB;

import mybeans.CCBean;

public class CCServlet extends HttpServlet {

    @EJB CCBean obj;

    public void doGet(HttpServletRequest request, HttpServletResponse response)
```

```

        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        double amt = Double.parseDouble(request.getParameter("amt"));
        if(request.getParameter("type").equals("r2d"))
        {
            out.println("<h1>" + amt + " Rupees = " + obj.r2Dollor(amt) + " Dollors</h1>");
        }
        if(request.getParameter("type").equals("d2r"))
        {
            out.println("<h1>" + amt + " Dollors = " + obj.d2Rupees(amt) + " Rupees</h1>");
        }
    }
}

```

### **CCBean.java**

```

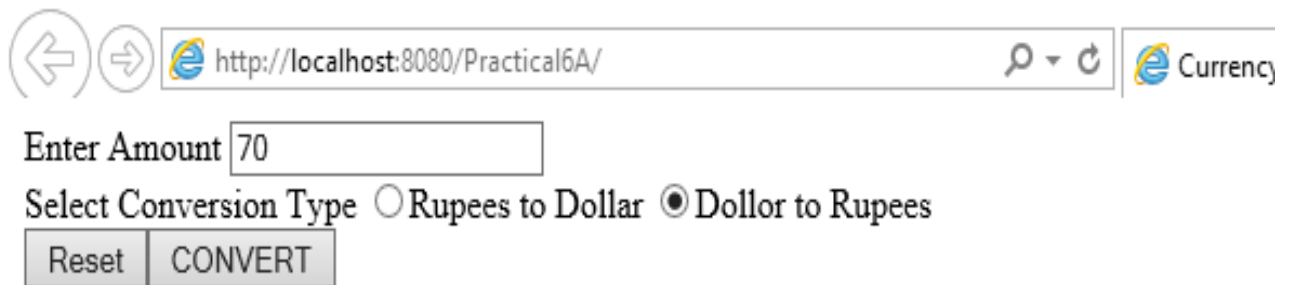

package mybeans;

import javax.ejb.Stateless;

@Stateless
public class CCBean {
    public CCBean(){}
    public double r2Dollor(double r){ return r/65.65; }
    public double d2Rupees(double d){ return d*65.65; }
}

```

**Output:**

A screenshot of a web browser window. The address bar shows the URL `http://localhost:8080/Practical6A/`. The page title is "Currency". The main content area contains a form with the following elements:

- A label "Enter Amount" followed by a text input field containing the value "70".
- A label "Select Conversion Type" followed by two radio buttons: "Rupees to Dollar" (unselected) and "Dollor to Rupees" (selected).
- Two buttons: "Reset" and "CONVERT".

**70.0 Rupees = 1.0662604722010662 Dollors**

**B) Aim:** Develop a Simple Room Reservation System Application Using EJB.
